The village of Oekoerito and the ad jacent districts have been thrown into mourning by a terrible disaster which occurred at the former place and which resulted in the death of 400 persons and the serious injury of 150 others. A public ball was held at the hotel of the village. While the dancing was in full swing a pine branch caught fire and fell to the floor. It blazed furiously, and almost instantly the dresses of several of the women burst into flames. A dreadful panic ensued, the revelers losing their heads completely. Many of them, with flames shooting out from their garments. rushed toward the barred exit, where

#### STRICT NEW ENGLISH LAW Grins of Clown and Acrobat's Contor tions May Be Copyrighted

in the Future. "All grimaces in Mr. So-and-So's

performances are copyrighted."

This notice on the program may greet the eye of a spectator of the harlequinade of the future if effect is given to the recommendations of the committee to consider the law of copyright, which has just concluded its sittings, says an English exchange. For in its report just published appears the recommendation that the protection of copyright should be extended to "entertainments in dumb show," and these Mr. Scrutton, K. C., a dissenting member of the committee, points out, must necessarily include facial expressions.

But the clown will not be the only one to benefit. The contortionist who ties himself in a novel knot, the gymnast who invents some new feat, may equally copyright them, for their entertainments may be "entertainments in dumb show."

Verbal contortionists, too, will have their need of protection, for the committee recommends that authors of lectures, speeches and sermons should have the sole right of delivering them, though newspapers may report them unless notice prohibiting publication is given at the time of delivery.

No longer will the author of a musical work groan at the thought of lost royalites when he hears his masterpiece ground out on a barrel organ, for he is to have the sole right of authorizing its "adaptation to instruments which can produce them mechanically."

And the artist who sees his picture reproduced by a cinematograph may be tempted to overlook the absence of some of its finer shades in reckoning the profits of the performance.

For, so the committee recommends, authors of literary, scientific or artistic works are to have the exclusive right of authorizing the reproduction and public presentation of their works
